

Simons Searchlight Registry Update SLC6A1

Data in these four graphs are from the medical history phone interviews collected in Simons Searchlight from 63 participants with SLC6A1.

April 2023

Ages in Years

Developmental and Behavioral Conditions

Neurological Problems

Gastrointestinal Problems

NOTES: Graphs show counts of individuals in each category. Individual participants may appear in more than one category if they report multiple conditions.

How to participate?

The information in this report is made possible by the active participation of the SLC6A1 community! Progress for individuals in your community with SLC6A1 is shown below - log in to your simonssearchlight.org dashboard today to check for new surveys and tasks. Your data could hold the clues geneticists need to find answers.

STEP 1

Information Spotlight on Development

We use a standardized measure called the Vineland Adaptive Behavior Scales (Vineland-3) to measure each person's development in communication, self-care, social skills, and in younger children, motor skills.

The Vineland is a useful tool for researchers and doctors to see a snapshot of a person's skills and watch how they change over time.

**28 SLC6A1 participants
ages 4 to 25 contributed to
this report**

Here is a look at how many SLC6A1 participants ages 4 to 25 years can do the following skills:

82% feed themselves

79% use functional
speech

46% show interest in
friends

Of children 4-9 years old,
100% are walking

We will continue to collect Vineland data every year. Over time, we will have a better understanding of how individuals with SLC6A1 change as they get older.
