

Simons Searchlight Registry Update MED13L

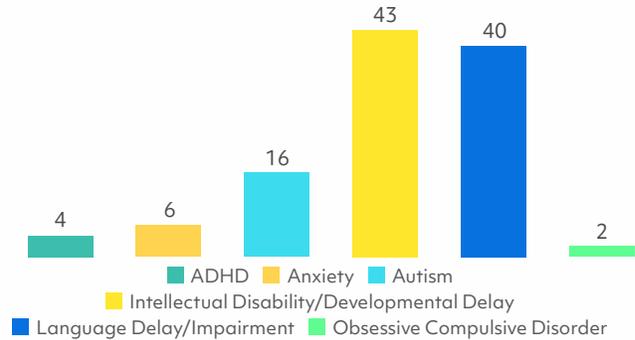

Data in these four graphs are from the medical history phone interviews collected in Simons Searchlight from 44 participants with MED13L.

April 2023

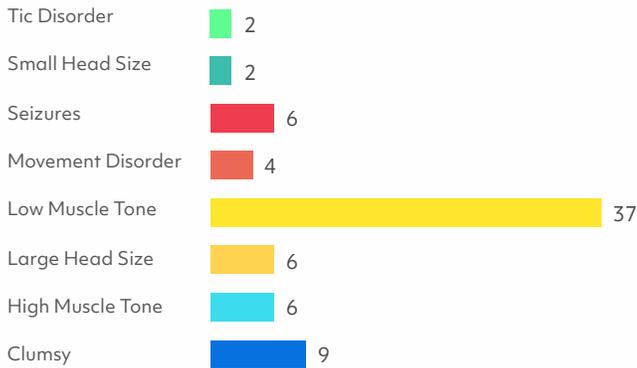

Ages in Years

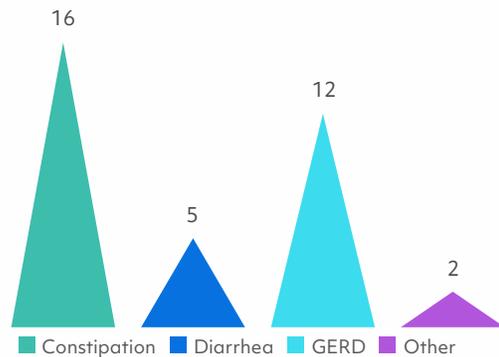

Developmental and Behavioral Conditions

Neurological Problems

Gastrointestinal Problems

NOTES: Graphs show counts of individuals in each category. Individual participants may appear in more than one category if they report multiple conditions.

How to participate?

The information in this report is made possible by the active participation of the MED13L community! Progress for individuals in your community with MED13L is shown below - log in to your simonssearchlight.org dashboard today to check for new surveys and tasks. Your data could hold the clues geneticists need to find answers.

STEP 1

Sign up online

126

STEP 2

Provide your genetic lab report

96

STEP 3

Share your important medical history

54

STEP 4

Fill out surveys

84

STEP 5

Provide a blood sample if you are interested

Information Spotlight on Development

We use a standardized measure called the Vineland Adaptive Behavior Scales (Vineland-3) to measure each person's development in communication, self-care, social skills, and in younger children, motor skills.

The Vineland is a useful tool for researchers and doctors to see a snapshot of a person's skills and watch how they change over time.

28 MED13L participants
ages 4 to 30 contributed to
this report

Here is a look at how many MED13L participants ages 4 to 30 years can do the following skills:

79% feed themselves

68% use functional
speech

43% show interest in
friends

Of children 4-9 years old,
93% are walking

We will continue to collect Vineland data every year. Over time, we will have a better understanding of how individuals with MED13L change as they get older.
