Simons Searchlight Registry Update 15q11.2 BP1-BP2 deletion

Data in these four graphs are from the medical history phone interviews collected in Simons Searchlight from 22 participants with a 15q11.2 BP1-BP2 deletion.

August 2023

How to participate?

The information in this report is made possible by the active participation of the 15q11.2 BP1-BP2 deletion community! Progress for individuals in your community with 15q11.2 BP1-BP2 deletion is shown below - log in to your simonssearchlight.org dashboard today to check for new surveys and tasks. Your data could hold the clues geneticists need to find answers.

NOTES: Graphs show counts of individuals in each category. Individual participants may appear in more than one category if they report multiple conditions.
We use a standardized measure called the Vineland Adaptive Behavior Scales (Vineland-3) to measure each person’s development in communication, self-care, social skills, and in younger children, motor skills.

We can learn how skills develop over time by looking at growth charts. The sample graph on the next page is an example growth chart, and the graphs afterwards show real Vineland-3 data from your community.

When we plot everyone together, we can see what people can do at younger and older ages. This is one snapshot in time. The more people fill out their Vineland over time, the more we can estimate what true longitudinal growth looks like for everyone in your community.

Scan the QR code below or use the following link (bit.ly/Searchlight_Vineland_Graph) for a video from Dr. LeeAnne Green Snyder, Clinical Research Scientist for Simons Searchlight, on how to read the Vineland Adaptive Behavior Scales growth charts.

We will continue to collect Vineland data every year. Over time, we will have a better understanding of how individuals with 15q11.2 BP1-BP2 deletion change as they get older.

Kindly note that these charts are from self-reported online research surveys and errors are possible. The skills shown are only estimates and may not apply to everyone. Remember that everyone develops at their own pace, and individual perspectives and responses may vary. Please let us know if you have any questions.
Expressive Language Development
(number of individuals)

Sample graph:
Developmental Levels in Speech at Younger and Older Ages

What does this mean as my child gets older?

- Each blue dot is a person. This is a 4 year old with a 3 year old level of speech.
- The trend line shows skills are going up at older ages.
- Typical milestone at 2 years old: Phrase Speech.

Along the bottom is the actual age of the person.

The dots are placed at the level at which they are expressing themselves.

A percentage of individuals are likely to be using language at age 4 and older.

Developmental Levels in Speech at Younger and Older Ages in 15q11.2 BP1-BP2 deletion

Expressive Language Development (16 individuals)

What does this mean as my child gets older?

- Along the bottom is the actual age of the person.
- The dots are placed at the level at which they express themselves.
- 100% of individuals are likely to be using language at age 4 and older.
Developmental Levels in Self Care at Younger and Older Ages in 15q11.2 BP1-BP2 deletion

Self Care Skills Development
(16 individuals)

What does this mean as my child gets older?

Along the bottom is the actual age of the person.

The dots are placed at the level at which they can do things for themselves.

100% of individuals are likely to be feeding themselves at age 4 and older.
Developmental Levels in Social Skills at Younger and Older Ages in 15q11.2 BP1-BP2 deletion

Social Skills Development
(16 individuals)

What does this mean as my child gets older?

Along the bottom is the actual age of the person.

The dots are placed at the level of their social behavior.

100% of individuals are likely to be making eye contact at age 4 and older.
